SUBJECT: Rework Seat Pack Container,  
Change Proposal LAC-29

STATINTL

TO: [REDACTED]

Change Proposal LAC-29 has been reviewed and is approved essentially as submitted. The Q-198 Seat Pack Containers, P/N Q-201 will be reworked to provide additional clearance for oxygen system components and to provide additional support points. The additional support points are to be so placed as to preclude the container from shifting or being deflected to positions hazardous to proper function of the various oxygen components. Also proper consideration must be given to the forces the Q-201 Container is required to sustain during ejection.

The Q-201 Containers will be provided to LAC by Work Order from the WSSC in lots of five (5) on an exchange basis until all Q-201 Containers have been modified. Request you provide the WSSC with a schedule under which this modification will be accomplished.
